

# Gliding into a smaller inventory

A reanalysis of diphthongs in Bernese German

---

Florian Matter 

2018-08-29

Institute of Linguistics, University of Bern

- 1 Introduction
- 2 Diphthongs in Bernese
- 3 /l/-vocalization
- 4 Phonetic properties
- 5 Conclusion

- High Alemannic variety in the German dialect continuum
- spoken mainly in the canton of Bern, Switzerland
- discussed here: Mittelland & Seeland
- one grammatical description (Marti 1985)
- not very consistent w/r/t phonology
- main question here: how many diphthong phonemes are there?

# Bernese consonant inventory

	bilabial	labiod.	alv.	postalv.	velar	glottal
plosive	p ɸ (p: p)*		t ɖ (t: t)*		k ɡ (k: k)*	
affricate	ɸf		ts	tʃ	kx	
fricative		f f: * ʋ	s s:	ʃ ʃ: *	x x: *	h
nasal	m m:		n n:		ŋ:	
lat. appr.			l l:			
rhotic			r			
glide			j			

(Marti 1985:42, \*added)

# Bernese vowel inventory

(Standard German  $/a\underset{\sim}{i}/$ ,  $/ɔ\underset{\sim}{y}/$ ,  $/a\underset{\sim}{u}/$ )

(Marti 1985:39–40)

# MHG vowels

(Hermann 1998:47)

# Development of MHG diphthongs

MHG		Bernese
/iə/	→	/iə/
/yə/	→	/yə/
/uə/	→	/uə/
/ɛi/	→	/ɛi/
/œy/	→	/œi/
/ɔʏ/	→	/ɔʏ/
?	→	/æi/
?	→	/a:ʏ/

- /æi/ very marginal; only in /æ̣ịs/ 'DEM' (≠ 'one')
- Staub's law:  $Vn \rightarrow V:, V\check{V} / \_ \left[ \begin{array}{l} +\text{cons} \\ +\text{cont} \\ -\text{son} \end{array} \right]$  (Werlen 1977)
- /ɛn(ə)s/ → /æ̣ịs/ (Staub & Tobler 1885-)
- also found in Standard German loanwords like /'ʃaɪsə/ → /'ʃæ̣ịs:ɛ/ 'shit'

- /pla:u/ 'blue', /kra:u/ 'grau', /kɛna:u/ 'genau', /pfa:u/ 'peacock', /ʃla:u/ 'smart'...
- from MHG /a:/ and /w/:
- MHG /bla:/, /bla:wəs/ 'blue', 'blue.N.INDF' (Hermann 1998:144)

## More diphthongs!

- explained as non-phonemic by Marti (1985:31) because:
  - combinations of vowel + glide
  - umlauted versions of phonemic diphthongs
  - shortened/lengthened versions of phonemic diphthongs

## More diphthongs!

- /æ:ɪ/ as in /t:ræ:ɪə/ 'turn', /kæ:ɪ/ 'steep'
- /œ:ɪ/ as in /ʃlœ:ɪər/ 'smarter', /plœ:ɪələ/ 'bruise'
- /ɑʊ/ as in /rɑʊft/ 'bread crust', /saʊft/ 'well'
- marginal:
  - /uɪ/ in /pʰuɪ/ 'ew!'
  - /ɔɪ/ in /hɔɪ/ 'hi!'
  - /ɑ:ɪ/ as in /lɑ:ɪ(i)/ '(s/he) let (IRR)' (Marti 1985)
  - /ɛ:ɪ/ /ksɛ:ɪə/, /ksɛ:ɪi/ '(s/he) see (IRR)' (Marti 1985)

## Origin of additional diphthongs

- Staub's law: /ranft/ → /raʏft/
- hiatus resolution with epenthetic /j/: OHG \*sa:en → /sæ:jə/ 'sow'<sup>1</sup>
- deletion of intervocalic /h/: OHG \*ga:hi → /kæ:j/ 'steep'
- (half-)umlauted versions of other diphthongs: /pla:ʊ/ 'blue' → /plœ:ʝələ/ 'bruise', /raʏft/ → /ræʏft/
- all not allophonic!

---

<sup>1</sup>also found in other Germanic languages; PG \*se:anǣ → Gothic *saian*, Old Saxon *sa:ian* (Kroonen 2012:428).

- /myəi/ 'struggle', /plyəiə/ 'bloom', /t:ryəiə/ 'gain weight'
- /myəi/ from non-syllabic version of feminine *-i*, compare /lɑŋ/ 'long', /lɛŋ:i/ 'length' (Marti 1985:30–31)
- but others from same hiatus resolution process as in \*sa:ən → /sæ:iə/

## Di- and Triphthongs

---

<b>iə</b>	<b>ɛi</b>	æ:i	ɔi
<b>yə</b>	<b>œi</b>	œ:i	a:i
<b>uə</b>	<b>ɔu</b>	au	æu
<b>æi</b>	<b>a:u</b>	ui	yəi
ɛ:i	ɛ:u		

---

bold: phonemic in Marti (1985)

# Di- and Triphthongs

---

iə	<b>ɛi</b>	æ:i	ɔi
yə	<b>œi</b>	œ:i	a:i
uə	<b>ɔu</b>	aʊ	æu
<b>æi</b>	<b>a:u</b>	ui	yəi
ɛ:i	ɛ:u		

---

bold: phonemic in Marti (1985)

- started in the late 1700s, spreading from rural Emmental (Baumgartner 1940:74)
- /l/ became [w] ([ɥ]) oder [ʁ] in certain positions, via [lʲ] (Haas 1983:1113)
- fairly widespread today (Leemann, Kolly, et al. 2014), not seen as a feature of Bernese (Christen 2001)

## Affected contexts

context	not vocalized	vocalized
ə_# <sub>σ</sub>	['fɔkəl]	['fɔku] 'bird'
_# <sub>σ</sub>	[ʃnæɪ·]	[ʃnæw·] 'fast'
_# <sub>σ</sub> _	['xæɪ:ər]	['xæw:ər] 'cellar'

## is [w] from /l/ phonemic?

- original distribution clearly allophonically conditioned, but:
  - not all geminates are vocalized; it's usually ['vɑ:l:is] 'Valais' and ['vɪl:ɑ] 'villa', not ['vɑw:is] und ['vɪw:ɑ]
  - not all singletons, either: usually [ital'jænər] statt [itaw'jænər] 'Italian'
  - no [w] after closing diphthongs: /phɔ̥ʊl/ 'Paul', /ʃtɛ̥i̯l/ 'steep'; \*[ʃtɛ̥i̯w] – but [tɛ:̥ʊ] from earlier /tɛ̥i̯l/ 'part'
  - after /u:/ we either find Ø, /mu:/ from /mu:l/ 'mouth', or /l/: /ʃvu:l/ 'gay', /kxu:l/ 'cool'
- all marginal cases, but: no synchronic automatic alternation

## Di- and Triphthongs, updated

---

iə	ɛj	æ:j	ɔj
yə	œj	œ:j	a:j
uə	ɔu	au	æu
æj	a:u	uj	yəj
ɛ:j	ɛ:u	ɔ:u	ʊu
æ:u	ɛu	œu	œ:u
ɪu	ɪ:u	ʏu	iu
iəu	yəu	uəu	

---

## /l/-vocalization in geminates

- word-medial geminates are usually described as ambisyllabic, coda position of  $\sigma_1$  and onset of  $\sigma_2$  (Hayes 1989)
- this explains why /l/-vocalization applied to geminates ([ˈxæɫ:əɾ] → [ˈxæw:əɾ] ‘cellar’)
- vocalization in coda (rhime) position

# Syllable structure of ['xæ:l:ər]/['xæw:ər]

## Homophony of /ɔ̥/ and earlier /ɔl/

- /ɔ/ + vocalized /l/ are homophonous with Diphthong /ɔ̥/ inherited from MHG
- intervocalically: ['p:ɔw:ə] 'built; pollen'
- important: second part of diphthong /ɔ̥/ is long before vowels, like vocalized earlier /l:/
- ...true for all closing diphthongs!

# Comparison with geminate consonants

data from Leemann & Kolly (2014)

# Comparison with geminate consonants

# Comparison with geminate consonants

## Comparison with geminate consonants

- all between 215 und 240 ms long
- considerably longer than surrounding (syllabic) vowels
- bigger phonetic study on relative duration to be done

## Analysis as glides

- large inventory of diphthongs, closing diphthongs all with [ɨ] or [ʉ]
- non-syllabic parts behave like geminate consonants
- analysis of closing diphthongs as /V/ + /j/ or /w/:
  - more economical than proposing ~30 diphthong phonemes
  - explains merger of inherited /ɔʉ/ and earlier /ɔl/
  - no marginal (diphthong) phonemes
  - captures behavior of /j/ and /w/ & their shared properties with other geminates
  - also explains triphthong /yɛj/ as combination of diphthong + glide
  - explains /ʃtɛj/ but not \*[ʃtɛjw]: no more than one glide in coda

# Syllable structure of /'hœj:ə/ 'make hay'

# Comparison: syllable structure of /'tɑ:nə/ 'fir'

# Bernese consonant inventory, updated

	bilabial	labiodental	alveolar	postalveolar	velar	glottal
plosive	p p:		t t:		k k:	
affricate	pf		ts	tʃ	kx	
fricative		f f: v	s s:	ʃ ʃ:	x x:	h
nasal	m m:		n n:		ŋ:	
lat. appr. rhotic			l l: r			
glide	w:		j:			

# Bernese vowel inventory, updated

- geminates generally rare
- if geminates, then glides often exempt (Maddieson 2008)
- Bernese **only** has geminated glides in 'V\_V position under my analysis
